Astoria Oyster Counter Stool

The key to creating the classic wicker weave is a skilful talent for braiding. Though the Astoria Counter Stool convinces the eye that it is made of the popular natural material that has cemented its place in design history, it is a UV-resistant resin wicker that is woven over a heavy-gauge aluminium frame to result in a much more durable outdoor counter stool. The weave and the sleek aluminium frame take on an aged feel thanks to the oyster finish covering the entire piece.
